PROFIT YEARS

Evidence-first - net of Indian costs - parallel to the gold/BTC system

Honest: survivorship-light universe - 2026 a down year - paper-test before capital

Systematic, rule-based — rank the universe, hold the best, de-risk on fear

WHY THIS WORKS

Momentum rewards strength (winners keep winning) — the most robust factor across markets. The edge is the BASKET, not any single stock — across many holds, winners' payoff beats losers' cost. Validated on a BROAD ~49-stock universe (the narrow 23-stock blend with low-vol was overfit).

EXIT RULE (no stops — proven to whipsaw)

A name is SOLD only when it drops out of the weekly top-5 (rotation). No per-stock stop-loss, no fixed target. Tested stops/exits ALL reduced returns — momentum needs room to breathe.

Rs1,00,000 compounded, net of cost — the money view

Every idea tested honestly — kept only what the data proved

KEPT (validated)

Pure-momentum picker

the robust core — Sharpe 0.79

Broad ~49-stock universe

hardened (narrow set was overfit)

Top-5 diversified basket

systematic, not stock-picking

REJECTED (tested, failed)

Intraday (ORB+VWAP)

loses every yr, -0.09%/trade

Stops / trailing / mom-break exit

whipsaw momentum -> cut returns

Avoid-losers selection filter

winners=losers at entry (AUC 0.47)

Sector cap / regime filter

too restrictive -> lower return

THE DEEP FINDING

Future winners and losers look IDENTICAL at entry (AI AUC 0.47, worse than random). So you can't dodge the losers without dodging the winners — the losses are the necessary cost of the edge. This is why it's a SYSTEMATIC BASKET, and why stops/filters all fail. Open frontier: point-in-time fundamentals.

Hard-won, evidence-based — the lessons behind ARJUNA

THE EDGE IS THE BASKET

Future winners & losers look identical at entry (AI AUC 0.47). You can't cherry-pick — hold the top-5, the math wins in aggregate.

STOPS WHIPSAW MOMENTUM

Every stop / trailing / exit filter CUT returns (mom-break: 145%->49%). The losers are the necessary cost of the winners.

HARDEN ON A BROAD UNIVERSE

On 23 stocks mom+low-vol showed Sharpe 1.23 — but it COLLAPSED to 0.42 on 49 stocks. It was overfit. Pure momentum held at 0.79. Always validate broad before trusting a number.

VIX DE-RISK = OPTIONAL

VIX de-risk lowers drawdown (24.7%->21.8%) but slightly trims return on the broad universe. A risk dial, not a free lunch.

INTRADAY IS NOISE + COST

11,695 intraday trades: -0.09%/trade, losing every year. Same lesson as fast-TF crypto. Long-term/positional is the real edge.

RETURNS ARE LUMPY, NOT SMOOTH

2021 (+49%) flatters the headline; factor decay is real and 2026 was -10%. Expect lumpy years - it's a compounder, not an annuity.

Drivers we embed (react to footprint, never predict headlines)

GLOBAL

- US S&P / Nasdaq (overnight)
- China -> metals/commodities
- GIFT Nifty gap
- US/India VIX (fear)

MACRO / FLOWS

- US Fed / 10y yield
- Dollar (DXY), USD/INR
- Crude oil (imports)
- FII / DII flows

SECTORS

- Metals <- China/LME
- IT <- US spend/USDINR
- Auto/EV <- demand/fuel
- Banks <- rates/credit

STOCK-SPECIFIC

- Earnings / PEAD drift
- Estimate revisions
- Index rejig
- News -> via VIX+price

Honest scorecard + the path to live

TODAY (~6 / 10, honest after hardening)

Pure-momentum engine on a broad universe: +164% / CAGR ~15% / Sharpe 0.79 / 6-of-7 years.
Hardening cut the inflated 1.23 to a trustworthy 0.79. Decent, not spectacular — every alternative tested & rejected. Current picks printed by india/picks_report.py.

HONEST CAVEATS

- +145% is on CURRENT large-caps (survivorship-light) -> true number is lower; harden before trusting.
- Rs1,000 is tiny vs Indian costs/STT -> a grow-into-it plan; F&O is last + capital-gated (90% retail lose).
- AI is a modest filter, not an oracle. We react to news via volatility, never predict it.
- Paper-trade before any real capital. The edge is real but lumpy (2026 was -10%).
